                     The present cDNA sequence is a fusion construct encoding sol(soluble)CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis,
                                                                                                                                                                                                                                                                                                                                                     Soluble CD39; ADP-induced platelet activation; platelet aggregation; unstable angina; myocardial infarction; stroke; ocronary artery disease; atherosclerosis; peripheral vascular occlusion; precelampsia; embolism; platelet-associated ischaemic disorder; lung ischaemia; thrombolytic; cerebral ischaemia; thrombosis; cerebral artery thrombosis; intracardiac thrombosis; nerous thrombosis; peripheral artery thrombosis; cogquiopathy; deep venous thrombosis; peripheral artery thrombosis; cagquiopathy; deep venous thrombosis; PB; pulmonary embolism; transient ischaemic attack; thrombus formation; cercebrogrotective; anciarteriosclerotic; vasctropic; anticoagulant; cerebrogrotective; anciarteriosclerotic; vasctropic; anticoagulant; coronary ischaemia; vascular occlusion; se.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.

The present sequence is the cDNA encoding the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line cDNA library, referred to as MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting anglogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, attherosclerosis, peripheral vascular occlusion, precclampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, coronary and cerebral artery thrombotic disorders including coronary, thrombosis, intracardiac and venous thrombosis, cosgulopathy, deep venous thrombosis (DVT), pulmonary embolism (PB) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GCGTGGTGCATCAAGTAGAAGAATGCAGGGTTAAAGGTCCTGGAATCTCAAAATTTGTTC 292

```
The present cDNA sequence encodes soluble CD39 having apyrase activity.

This was derived from a cDNA library prepared from a human B cell line
referred to as MP-1. Soluble CD39 retains the capacity of wildtype CD39

Co metabolise ATP and ADP at physiologically relevant concentrations as
well as the ability to block and reverse ADP-induced platelet activation
and recruitment including platelet aggregation. This is used in the
treatment of unstable angina, myocardial infarction, stroke, coronary
cartery disease or injury, atherosolarosis, peripheral vascular occlusion,
preclampsia, embolism, platelet-associated ischaemic disorder including
coronary ischaemia and cerebral ischaemia, a hrombotic
disorder including coronary artery thrombosis, cerebral artery
thrombosis, intracardiac thrombosis, peripheral artery thrombosis, compliant ischaemia, a thrombosis,
thrombosis, thrombosis, coagulopathy, deep venous thrombosis, venous
thrombosis, thrombosis, cransient ischaemic attack. Soluble CD39 is also
useful for preventing thrombus formation or reformation, occlusion,
tecclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      113 GITCAACCCAGAACAAAGCAITGCCAGAAAACGITAAGTAIGGGAITGIGCTGGAIGCGG 172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists, for treating a cardiovascular disease, e.g. chronic immune myocarditis, congestive heart failure, aneurysm, angina, embolism, restenosis, ischemia or thrombocytopenic purpura.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-1BB, CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists are useful for treating cardiovascular disorders, e.g. chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restenosis, ischaemia or thrombocytopenic purpura.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian calls by altering the ATP gradient across the biological membrane of the target call. The method is useful for modulating drug resistance of calls. It inseful for increasing the sensitivity of calls to chemotheraputic and antibiotic agents and increasing resistance to herbicides. The present sequence is human ATP diphosphohydrolase coding sequence. This sequence encodes was used in the present invention to modulate drug resistance. Note: The present sequence is not shown in the specification, but is referred to via its GenBank accession number
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTTCTTCTCACACACAGTTTATACATCTATAAGTGGCCAGCAGAAAAGGAGAATGACACAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠે
```

The invention relates to a conjugate (1) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is biodegradable polymer, where (i) enzymatic activity of the enzyme is conjugate than that of the polymer, or (ii) the half life of the enzyme is longer than that of the polymer. The enzyme is longer than that of the cenzyme in the absence of the polymer. The enzyme is longer than that of the conjugate. The enzyme is a multimeric, soluble and/or extracellular mazyme, colymer. The enzyme especially a soluble form of CD39 and catalyzes hydrolysis of nucleoside diphosphate. The conjugate can be used to treat abnormal aggregation of platelets, particularly cardiovascular disease.

C diseases relating to abnormal levels of extracellular nucleotides or abnormal aggregation of platelets, particularly cardiovascular disease, cancer, sepsis or a disease related to graft transplant. (1) is also used infarction, unstable angina, atherosclerosis, pre-eclampsis, embolism, claraction, unstable angina, atherosclerosis, pre-eclampsis, embolism, clasorders, and thrombosis and coagulopathies associated with exposure to a foreign or injured tissue surface, in combination with angioplasty, carctid endarterectomy, anastomosis of vascular grafts and chronic cardiovascular devices. The present sequence represents a DNA encoding a New enzyme polymer conjugate used for treating abnormal levels of extracellular nucleotides or platelet aggregation, graft transplant, cardiovascular disease, cancer and sepsis. CD39; nucleoside diphosphate; thrombolytic; anticoagulant; cardidovascular; cytostatic; antibacterial; immunosuppressive; cardiant; antianginal; antiarteriosclerotic; gynaecological; cerebroprotective; cancer; human; apyrase; gene; de.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1073
II have not been obtained yet. Assuming that the CD39 gene product is an ATPDase type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDases using the CD39 sequence (AAT38516)
                                                                                                                                                                                                                                                                                                                                                                      232

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                              Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphosphohydrolase activity under cellular activating conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence encodes human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-3584

A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.

SEQ ID NO 1475; SOpp; English.

The invention relates to a composition comprising a plurality of CDNAs response. The invention also relates to a method of diagnosing or response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic conditions to form one or more hybridisation complexes, detecting the nucleic conditions to form one or more hybridisation complexes, detecting the hybridisation complexes and comparing the levels of the detected in a non-diseased sample, where an altered level of the detected hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and condition. Also disclosed are an expression profile comprising an immunopathology, such as crohn's disease, asthma, are useful as hybridisable array elements in a microarray for monitoring the diagnosis of an immunopathology, such as Crohn's disease, asthma, culcerative colitis, hypereosinophila, irritable bowel syndrome, colecoarthritis rheumatoid arthritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in drug discovery and development, toxicological and carcinogenic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed appear of the printed payer of the printed payer. from USPTO at segdata.uspto.gov/seguence.html

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or in a manual, particular properties to the nucleic acid or a malecule which binds to the polypeptide equence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, isohemia, angina, mortiand and infarction, chronic heart disease, cardiac congestion or macular degeneration due to age or osteoporosis. Estand CDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSDORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
